PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years building business software with JavaScript, TypeScript, React and Node.js. Currently the lead developer of a multi-tenant SaaS for restaurants (point of sale, order management and online menu) running in production for 12 companies and 18 locations. I start from the business problem: I gather requirements with the client, model the data and rules, build with automated tests and document every decision. Experience in data migration, performance, multi-tenant security and AI-assisted development.

WORK EXPERIENCE

Full Stack Developer 07/2026 – Present

Quantum Infinity Technologies | *Colombia*

- Lead developer of a multi-tenant SaaS for restaurants (POS, order management, online menu, product landing pages and admin console) built with React, Node.js/Express and Firebase, in production for 12 companies and 18 locations; authored 96% of the commits since August 2026 (408 of 424).
- Extended and maintain the POS REST API (316 endpoints: cash register and reconciliation, purchases with taxes, inventory by location, production and reports) with about 1,600 automated test cases.
- Designed a reusable data importer (generic engine, per-source adapter, preview and rollback) and migrated a client from VectorPOS: 1,703 customer, supplier and recipe records in about 21 minutes.
- Integrated the online menu, OMS and POS through a versioned order contract with transactions and idempotent IDs that prevent duplicate sales, plus customer notifications via WhatsApp templates.
- Cut sale checkout time by about 50% (from 1,390 ms to ~700 ms) by batch-loading recipes from Firestore; validated against 2,470 orders.
- Built an internal console in 9 days to onboard companies and enable their apps (170+ tests) and implemented multi-tenant authentication with Firebase custom tokens, scrypt password hashing and login rate limiting.
- Documented the product (79 technical documents, 44 business rules, architecture decision records and phased roadmaps) and work with AI (Claude Code) from specs and acceptance criteria.

Full Stack Developer 03/2026 – 05/2026

Mr. Max Vet | *Cali, Colombia*

- Designed and built VetPOS, a point of sale and veterinary management platform ready for multiple clinics, with NestJS, TypeORM, MySQL, React, TypeScript and Docker Compose.
- Built 12 backend modules: sales, inventory with stock movements, customers, pets, appointments, services, expenses and Excel reports.
- Implemented JWT authentication with three roles (super admin, admin and employee), security headers and request rate limiting.

Software Developer & Customer Success 09/2025 – 03/2026

Softgic | *Medellín, Colombia (remote)*

- Built Mini Programs (AXML, ACSS and JavaScript) for Claro's super app: Cinemark Preferencial (second-largest contributor to the repository) and the Templo de la Moda checkout flow (cart, payment summary and shipping details).
- Built the plan and service sales flow of Claro's Sales App in Next.js 16, React 19 and Tailwind CSS: catalog, plan review and admin views.
- Acted as the link between clients and the technical team: turned business needs into requirements and supported functional testing through QA.

Software Developer & Customer Success 08/2023 – 07/2025
Lappiz | Medellín, Colombia (remote)

- Technical lead of the Relatoría project for Colombia's Office of the Inspector General (Procuraduría General de la Nación), coordinating team activities and deliverable quality.
- Built business solutions with JavaScript, React, Next.js and SQL Server on the Lappiz platform to automate business processes.
- Gathered requirements with government agencies and corporate clients, and designed databases for critical processes.
- Built Power BI dashboards and automated document generation with jsPDF, working with Scrum, Azure DevOps and Git.

Software Development Intern 02/2023 – 08/2023
Softgic | Medellín, Colombia (remote)

- Built proofs of concept for clients across industries with JavaScript, HTML5, CSS3, Bootstrap and Kendo UI, backed by SQL Server databases and Power BI reports.

PROJECTS

- **Atlas Spaces** (github.com/MateoHdz/atlas-spaces): Coworking booking platform that prevents overlapping reservations with MongoDB transactions. Express, React, Zod, JWT, Docker Compose and 47 Jest tests.
- **DaySecurity CRM**: CRM for an electronic security company: PDF quotes, inventory, material assignment to technicians and commissions. NestJS, React and MySQL.
- **Turnia** (github.com/MateoHdz/Turnia): Product design for a SaaS that calculates the labor cost of every shift under Colombian law (night, Sunday and overtime surcharges) before the schedule is published.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL, Python, HTML5, CSS3
Frontend: React, Next.js, Vite, Tailwind CSS, Angular, Zustand, Recharts
Backend: Node.js, Express, NestJS, REST APIs, JWT, Zod
Data: Firebase (Firestore, Auth, Storage), MySQL, SQL Server, MongoDB, TypeORM
Testing & quality: Jest, node:test, Firestore emulator, functional testing
Tools: Git, GitHub, Azure DevOps, Docker, Postman, Power BI, jsPDF
Practices: Scrum, requirements gathering, data modeling, technical documentation (ADR), AI-assisted development (Claude Code)

EDUCATION

Software Analysis and Development Technologist | SENA, Guadalajara de Buga, Colombia 2021 – 2023

LANGUAGES

Spanish: Native | English: Basic (A2), actively studying
